Express® FP: Providing Safe, Effective Protection

When it comes to protecting cows and developing calves and heifers from leading reproductive diseases — including bovine viral diarrhea (BVD), infectious bovine rhinotracheitis (IBR), bovine respiratory syncytial virus (BRSV) and parainfluenza 3 (PI3) — you want a vaccine that you can trust to be effective and safe. With EXPRESS FP, you won’t have to look any further.

Top Reasons to Use EXPRESS FP

• First vaccine licensed to prevent BVD persistent infection (PI) in calves
• Supported by money-back guarantee
• Increased immunity and long-lasting protection
  ◦ Twelve-month duration of immunity (DOI) against:
    ◦ IBR abortions
    ◦ PI calves and disease caused by BVD Types 1 and 2
  ◦ Adjuvanted for optimal response
• Rapid onset of immunity to key reproductive diseases
  ◦ Separate peer-reviewed and published studies show quick onset of protection against IBR\(^1\) and BVD Types 1 and 2\(^{1,2}\)
• Preventing disease comes standard
  ◦ Prevention of urinary shedding of *Leptospira borgpetersenii* serovar hardjo (type hardjo-bovis) claims on all EXPRESS FP combinations with lepto, except EXPRESS FP 10-HS
• The flexibility you want
  ◦ Approved for pregnant cows and calves nursing pregnant cows, as long as the cows were vaccinated in the last 12 months with any EXPRESS FP product according to label directions

*Except EXPRESS FP 10-HS.
