DESCRIPTION
Fluorofil® is a monofilament polypropylene nonabsorbable, sterile surgical suture, composed of a strand of polypropylene, a synthetic linear Polyolefin. Polypropylene sutures are dyed fluorescent pink.

CHARACTERISTICS
Fluorofil® polypropylene sutures are fluorescent under ultraviolet light for easy visualization.

Advantages include:
• Increased visibility of suture at hairline
• Excellent security with snug and flattened knots
• Minimal memory and fraying
• Uniform diameter of the suture

INDICATIONS
Fluorofil® sutures are intended for use as non-absorbable suture in animals only. Because the suture material fluoresces under ultraviolet light, it is especially useful where easy visualization of the suture is needed.

CONTRAINDICATIONS
The use of this suture is contraindicated on patients with known sensitivities or allergies to its components. For use in animals only, not for use in humans.

TENSILE STRENGTH
Fluorofil® polypropylene sutures are non-absorbable; no significant change in strength retention is known to occur in vivo.

COLOR
Pink

PACKAGING
Fluorofil® is available in USP sizes 4-0 through 0 (metric sizes 1.5-3.5).

Fluorofil® is available with needles in one dozen boxes. Three dozen suture boxes available on customer request.

FOR VETERINARY USE ONLY
