Dectomax-CA1 is conditionally approved by FDA pending a full demonstration of effectiveness under NADA 141-616.

**IMPORTANT INFORMATION:** Dectomax-CA1 Injectable (Cattle only), **as authorized under the Conditional Approval for use against New World screwworm**, has a 35-day pre-slaughter withdrawal period. Do not use in calves to be processed for veal. Do not use in female dairy cattle 20 months of age or older, except under the conditions of the Emergency Use Authorization. Use in dogs may result in fatalities.

**Dectomax/Dectomax-CA1 Injectable Emergency Use Authorization**, authorized for the duration of the emergency declaration, does not provide full or conditional approval but the Center for Veterinary Medicine (CVM) at the Food and Drug Administration (FDA) has determined that Dectomax/Dectomax-CA1 may be effective and safe. Dectomax/Dectomax-CA1 Injectable, **as authorized under the Emergency Use Authorization for use against New World screwworm**, has a 35-day pre-slaughter withdrawal period for lactating dairy cattle, dry dairy cattle, replacement dairy heifers, sheep and deer, and a 24-day pre-slaughter withdrawal period for swine. Treated calves and calves born to treated cows should not be processed for veal. Withhold milk from dairy cattle for 468 hours (19.5 days) after treatment has ended. Not for use in lactating sheep. Not for use in horses less than 1 year of age. Consult your veterinarian for assistance in the diagnosis, treatment, and control of parasitism.

All details on the proper use of this product in the cited species are provided in the US FDA Center for Veterinary Medicine Fact Sheet(s), available via the following links or QR code.
